Welcoming and flexible  
seating option

Pineapple

# BODEN

Our popular range of beanbags that offer safety, durability and comfort

New filling material offering long-term comfort, made from recycled content

Our Donut and XL beanbags are now filled with chipped foam which is left over from making our sofas and chairs. The benefits include:

- 100% of the materials come from recycled content
- Improved support and comfort
- No need to refill/top-up the filling over time
- Co2 emissions have been reduced by 53%

Double stitched seams and non-accessible zips prevent tampering and misuse.

**Sensory rooms** can provide a relaxing, calm environment that can help aid safe deescalation practices. Boden beanbags are an ideal solution for these areas by offering a flexible, comfortable seating option.

# EVIDENCE BASED DESIGN

As part of the development process of the Boden Rocker, we trialled a prototype at 2 mental health hospitals (Adult and CAMHS) and sought feedback from healthcare professionals.

This valuable feedback helped our design team to refine the design to achieve maximum benefit for the users and caregivers.

## ✓ DESIGNED IN ASSOCIATION WITH HDR

The Boden Rocker was designed in association with Jason Beshore, Health Principal at HDR Architecture.

As part of his work designing behavioral health spaces, he noted patients self-soothing by rocking back and forth on the floor rather than using available rocking chairs. After talking to care providers and conducting research to learn more, Jason presented us with a concept, and our product design team set to work bringing this concept into reality, creating a prototype which was trialled in a live environment.

## ✓ TACTILE, PROPRIOCEPTIVE AND VESTIBULAR INPUTS

The Rocker is designed to provide gentle, controllable vestibular stimulation, helping to comfort and calm those in crisis.

The shape, size and softness of the product also offer tactile (touch) and proprioceptive (sense of body positioning) inputs which provide a supportive feeling of reassuring wrap-around contact.

These attributes are particularly important in mental health settings where staff are unable to provide physical contact like a reassuring hug to those in crisis.

## ✓ A SUSTAINABLE CHOICE

As part of the manufacturing process of our other seating products, small pieces of waste foam are generated. We use this waste foam as fillings for our beanbags, reducing our CO2 emissions.

The plastic base of the Rocker is made from 100% recycled polyethylene

The Boden Rocker is made from 64% recycled content, which means the carbon footprint of the product is reduced from 173kg to 47kg of CO<sub>2</sub> – a 72% decrease.

*“The patient’s seclusion/restraint episodes decreased in frequency by nearly 75%.*

*When the patient did have episodes of aggression or self-injury, they were significantly shorter and less intense overall”*
