RYNO® MODULAR → LINKING BRACKET PART 2

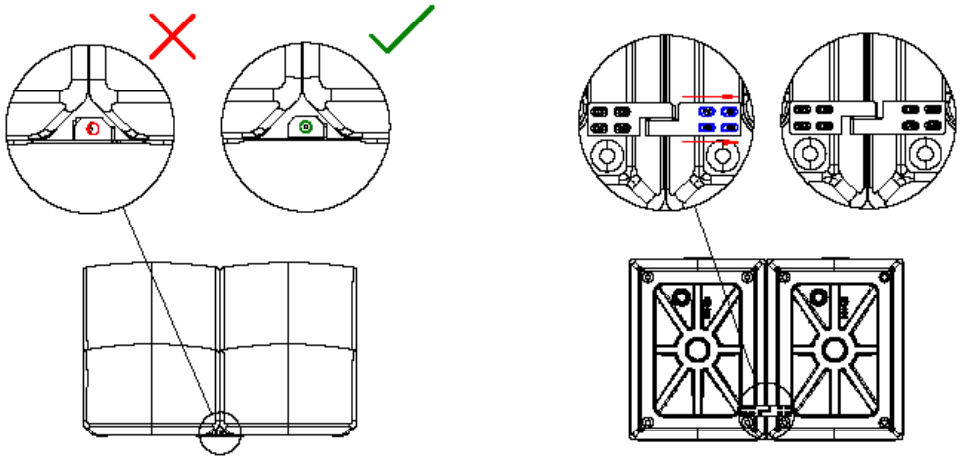
01

Note: If you wish to link multiple Ryno modular sections together, refer to Instruction Manual Part 1 and repeat Steps 1-10 for each additional module before continuing.

With all of the brackets installed, butt the left and right modular sections up against one another and push the left-hand modular section backward until the brackets connect. The fronts of the modules should sit inline with one another.



02

Note: If the securing holes on the brackets are misaligned, unscrew the x4 M6 security bolts that are holding the misaligned bracket in place until the bracket becomes adjustable.

Adjust the bracket to the appropriate position using the oval fixing slots. Once the bracket is in the correct position, re-secure it using the x4 M6 security bolts, ensuring that they are not overtightened.

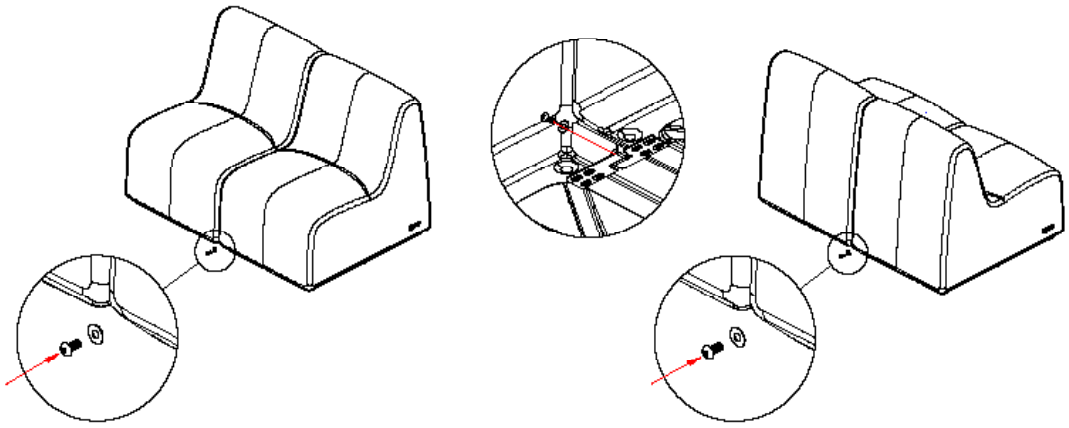
RYNO® MODULAR → LINKING BRACKET PART 2



03	Using a long reach magnetic bit holder drill extension on your drill, fix the provided M10 security bolt and washer into the two front and rear brackets so that they are securely connected. Ensure that the screws are not overtightened. If you wish to join multiple modular sections together, repeat this step as many times as necessary.
